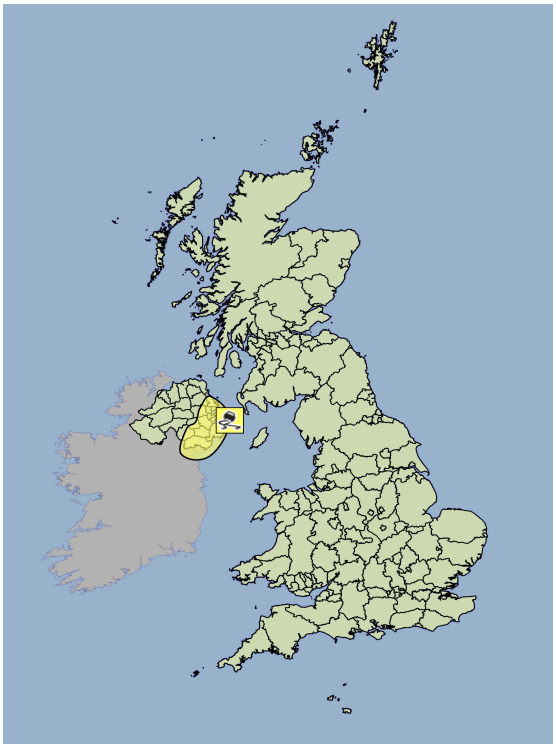
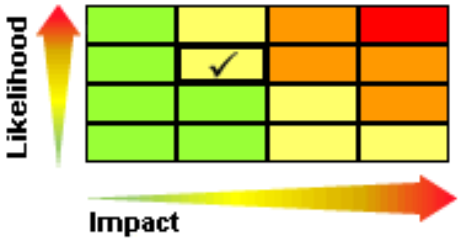
National Severe Weather Warning Service





Chief Forecasters Assessment
Showers will affect northern and some central parts of the UK during the next couple of days, these falling as sleet, snow or hail, but the most frequent showers are likely in areas exposed to the easterly winds. Accumulations of snow will be restricted to overnight and early morning, with melting occurring during the day, leading to a risk of ice forming on untreated surfaces at night.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **20:00 on Mon, 25th Mar 2013** until **09:00 on Tue, 26th Mar 2013**

Wintry showers will affect some eastern parts of Northern Ireland on Monday evening, overnight and into Tuesday. As temperatures fall after dark this will lead to a risk of ice on untreated roads, especially where melted snow refreezes. In addition, the showers may give slight falls of 1-2 cm in places. Drivers are advised to take extra care and be aware of the risk of some disruption to travel.
